

Productive Email Management

Spam Filtering, Virus Protection, Monitoring and Reporting

Now with Content Filtering, Outbound Scanning, Signatures & New Reports

Email Management Tools

- Spam Filtering
- Virus Scanning
- Content Filtering
- SMTP Management
- Logging and Reporting
- Inbound and Outbound Scanning

DoubleCheck Your Email

The DoubleCheck Email Manager™ with McAfee Anti-virus is a gateway email appliance that checks every email for spam and viruses without requiring new server or desktop software.

Your organization can proactively manage email to improve productivity and reduce costs. User-friendly browser-based reports are easily generated from the extensive log file database.

Prevent Harmful, Offensive and Costly Email from Entering Inboxes

DoubleCheck stops messages before reaching your mail server and scores every message for spam based on leading anti-spam technologies.

All messages are scanned using McAfee's anti-virus engine. Anti-spam, anti-virus and product feature updates are done automatically.

Improve Productivity, Reduce Costs and Enhance Business Intelligence

DoubleCheck's primary benefit comes from significantly reducing the time wasted dealing with spam and viruses.

You save the time and costs of configuring, training and updating individual users and rules. Network traffic, storage requirements and server performance also improves.

Satisfied Customers

"DoubleCheck has saved us time and money. Spam and viruses are a major drain on productivity. With budgets as tight as they are, DoubleCheck is a smart investment on our part."
- IS Director, County Government

"Our customers include small businesses, law firms, hospitals and government agencies. Spam is hot and DoubleCheck is a great solution."
- President, IT Solution Provider

"We have over 225,000 messages running through our DoubleCheck system every day. We are able to better serve our customers while saving time, bandwidth and storage."
- Network Administrator, ISP

Please contact an Authorized DoubleCheck Reseller for information, demo and pricing.

Improve Email System Reliability with Easy and Economical Operation

DoubleCheck protects your mail server from attack by blocking known spammers and your lists of bad senders and recipients. Significant processing is offloaded from the email server.

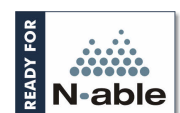

- High ROI and low cost of ownership:
- Reliable network appliance
 - Straightforward one-hour install
 - Simple user-based licensing
 - User-friendly Admin Console
 - Low-cost Maintenance Contract

Monitor and Document Email Use

With DoubleCheck, you can manage inbound and outbound email, plus add signatures/disclaimers to outbound mail. Track statistics for email traffic, spam, viruses, senders, recipients and more. Conduct searches to located messages and use the built-in ROI calculator.

10 Reasons to DoubleCheck

1. Increase employee productivity
2. Better understand email use, both inbound and outbound
3. Simple to install and support
4. High spam accuracy rate
5. McAfee AV scans all email
6. Simple, yet detailed logging and reporting
7. Reduce load on email server
8. Reliable and scalable... "It just works."
9. Auto-updates of key services, plus remote file backup
10. High ROI in all markets

The **DoubleCheck Annual Software Maintenance Contract** includes:

1. **Automatic updates** of anti-spam engine, rules and technologies.
2. **Automatic updates** of anti-virus engine and dat files.
3. **Automatic updates** of features, reports, admin console and system.
4. **Automatic remote back-up** of configuration files.
5. **Free support** by phone and email.

A 3-year parts and labor depot warranty is included with each system.

FEATURE	FUNCTION	BENEFIT
System Configuration		
Network appliance, Software or ASP options	Combined software/hardware solution.	Easy, low cost installation and ownership.
Tower system (Celeron 2.0 GHz, 256 MB)	1,250 queue messages/hr. (average)	Simple, small and powerful form factor.
Rack system (P4 2.8 GHz, 512 MB, 1U)	2,000 queue messages/hr. (average)	Additional capacity in rack system.
Licenses: Under 250 users, 250+ and ASP	Straightforward and flexible license levels.	Simple and economical licensing model.
Local and remote configuration file backup	Access for support and daily backup.	Simplified support and restore of settings.
Customizable interface with integrated Help	Flexible appearance and efficient Help menu.	Increase adoption and ease of use.
Annual Maintenance Contracts	Subscription update for services and support.	Reduce admin costs. Improve performance.
3-Year Hardware Warranty (included)	Covers hardware parts and labor for 3 yrs.	Reduce risk and improves project life.
Spam Filtering		
Multi-User, Multi-Role Login	Global, per-domain and per-user settings.	Provide flexibility and control to individuals.
Over 800 customizable heuristic rules	Score messages against proven criteria.	Improve accuracy, productivity and ROI.
Tiered Scoring Thresholds (customizable)	Identify, tag, quarantine, delete, reject spam.	Increase control while tracking all messages.
Real-time Blackhole Lists (RBL)	Known list of spam senders.	Reduce network traffic; offload processing.
Auto Whitelisting and Custom lists	Allow and stop addresses and domains.	Improve productivity and control.
Bayesian Classification	"Tokenize" email based on spam/not spam.	Improve "grey area" email scoring accuracy.
Support for Razor, Pyzor and DCC	Leverage checksum clearinghouses.	Improve spam scoring accuracy.
Content Filtering / Policy Management		
Block text in email Header and Body	Enforce acceptable content policies.	Improve content control and spam accuracy.
Block attachments	Enforce acceptable content policies.	Reduce traffic and improve security.
Support for wildcard and regular expressions	Create custom or unique policies as needed.	Reduce traffic and improve security.
Global, Domain and User-level Policies	Allow settings to vary as needed.	Improve control, flexibility and security.
SMTP Management		
Outbound email scanning	Log and report on outbound email traffic.	Expand knowledge of email use and users.
Outbound Signatures and Disclaimers	Add global, domain or user-level content.	Enhance regulatory compliance, marketing.
Anti-relay, plus Daemon/Message config	Limit access due to multiple criteria.	Eliminate unauthorized use and server load.
Multiple mail routes/domains	Support traffic for multiple domains.	Reduce duplicate costs and admin.
Bad Sender/Bad Recipient lists	Stop traffic at SMTP level.	Reduce network traffic and storage.
SMTP Access Rules	View rules and settings for IP ranges.	Enhance administration and control.
Support for Sender Policy Framework (SPF)	Filters and delivers SMTP traffic.	Reduce spam, viruses and forgery.
Virus Scanning		
McAfee AV engine	#1 AV engine and R&D worldwide.	Protect network, users and reputation.
Automatic virus signature updates / extra.dat	Continuously checks for virus updates.	Increase protection; reduce admin costs.
Attachment scanning	File attachment name, type or size.	Reduce likelihood of virus attack.
Multiple message handling options	Notify administrator and sender.	Reduce admin time; increase control.
Logging, Reporting, Monitoring and Alerting		
Management, "Quick" and System reports	View, analyze and monitor traffic trends.	Proactively manage email based on data.
Logging, detailed and "Quick" Search engine	Log inbound (and outbound) email headers.	Improve business intelligence from email.
Spam, Virus, Policy and Email reports	View, analyze and modify email traffic trends.	Proactively manage email based on data.
Per-Domain and per-user logs and reports	View, analyze and modify email traffic trends.	Improve decisions and policies tied to email.
Trend, Performance and ROI charts	Understand traffic and productivity issues.	Proactively monitor system and traffic.
